SERUM CA 125 : **31.5 U/mL.**
(Chemiluminescence Immunoassay)
(Alinity i, Abbott)

(94.4% of healthy subjects have values <35 U/mL.)

(Although the highest CA 125 values occur in patients suffering from Ovarian Carcinomas, clearly elevated values are also observed in malignancies of the endometrium, breast, gastrointestinal tract and various other malignancies.
CA 125 levels may be elevated in certain non malignant conditions like Endometriosis, Benign Ovarian Cysts, Pancreatitis, Hepatitis, Cirrhosis, Tuberculosis & Crohn's disease)
